EDUCATION

University of California, San Diego

Bachelor of Science in Data Science and Business Economics

Cumulative GPA: 3.83

Awards and Honors: Provost honors

Relevant Coursework: Data Structures & Algorithms, Linear Algebra, Machine Learning, Statistical Methods

San Diego, California

Expected - May 2027

RESEARCH EXPERIENCE

Tan Labs

Research Assistant

- Developed **LLM-integrated decision systems** for robotic task execution using language-conditioned policies
- Implemented **reinforcement learning** frameworks in **MATLAB** to map natural language inputs to control actions
- Designed **simulation** environments to **evaluate policy performance** under dynamic and uncertain conditions

San Diego, California

April 2025 – June 2025

Undergraduate – Graduate Economics Lab

Research Assistant

- Applied **causal inference methods** (OLS, IV, 2SLS) in Python on large-scale labor market data
- Modeled behavioral and employment dynamics** under economic uncertainty using statistical learning techniques

San Diego, California

April 2025 – present

WORK EXPERIENCE

Jainam Broking

Quantitative Researcher/Developer Intern

- Back tested options, futures, and equity strategies across instruments and market regimes, evaluating performance on historical market data.
- Designed and researched systematic options/futures/equity strategies end to end, from hypothesis to implementation, feeding the team's quantitative research pipeline.

Surat, India

June 2026 – August 2026

Triton Trading Group

Quant Researcher

- Developed systematic strategy using **Fama–French three-factor** model, achieving **1.3 Sharpe over 6-year back test**
- Built **Python-based back testing pipeline** with walk-forward and out-of-sample validation
- Applied statistical learning techniques for **feature selection** and model robustness across market regimes

San Diego

Jan 2026 – Present

Data Science Society

Consulting Director

- Built consulting pipeline connecting students with research labs for applied ML projects
- Structured project workflows (scoping → deployment) for data science engagements
- Led teams delivering machine learning solutions for academic research

San Diego

April 2026 – Present

PROJECTS

Multi-Agent Reinforcement Learning & Secure Communication https://dk-01.netlify.app/research/DSC190_Reinforcement_Learning.pdf

- Built a multi-agent RL framework for **secure, adversary-resilient** communication in an interactive grid-world.
- Combined actor–critic methods, reinforce, supervised learning, and tabular control in a **co-evolving adversarial** system.
- Demonstrated learned encryption strategies inspired by neural cryptography, evaluated via **mutual information** and **entropy** metrics.

Monte Carlo VaR & Portfolio Risk https://github.com/anigmea/Monte_carlo

- Built correlated multi-asset GBM simulations and constrained portfolio optimization for VaR/CVaR, with stress testing and distribution diagnostics.

SOMA <https://devpost.com/software/soma-y34d6m>

- Built a research project showing reinforcement learning agents recover game-theoretically optimal deception policies in a cyber-defense setting.

ADDITIONALS

- Machine Learning & Data Science:** TensorFlow, Keras, Pandas, NumPy, Matplotlib, Reinforcement Learning, Statistical Modeling, Econometrics
- Programming:** Python, Java, JavaScript (Node.js, Express.js), SQL
- Web Development:** React, HTML/CSS, REST APIs, Docker, Digital Ocean
- Development Practices:** Git, Agile Development, Unit Testing
- Languages:** English, Hindi
- Research Focus:** Machine Learning, Data Science, Game Theory, Algorithm Development
- Strengths:** Algorithmic Problem Solving, Research Methodologies, Academic Writing, Economic Analysis, Game Theory
- 2nd Place ICG X AKPsi Case Competition at UC Irvine
